

AUDIOkit

1PXFED

One Way Surface Mount Intercom Kit With Keypad

Simple 2 wire connection to intercom

Robust surface mount door station

Backlit in green

Dry contacts or AC lock release

2 relays

The 1PXFED kit from Farfisa provides an elegant and simple to install solution for 1 way audio installations where an access control keypad is required. Thanks to the use of 1+1 technology only 2 conductors are needed to connect the stylish Exhito internal intercom to the Profilo surface mounted door station. The Profilo series benefits from a robust aluminium construction with stainless steel button and green back lighting of the nameplate and keypad.

As the kit uses standard Farfisa products it can easily be tailored to suit individual requirements such as an additional door station, further internal units and external bell activation.

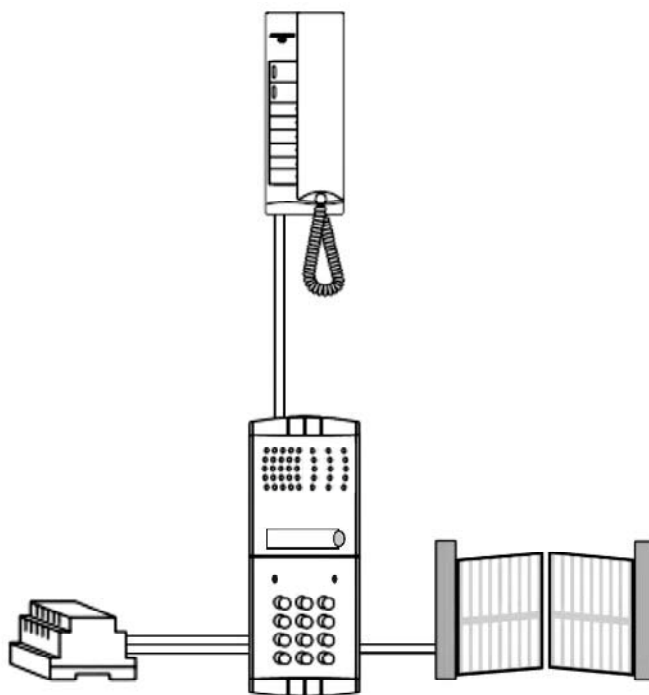

The system can provide either an AC output for a traditional lock release or dry contact switching to activate other types of lock or electric gates.

External unit dimensions: 118 x 265 x 80

Internal unit dimensions: 270 x 44 x 47
